

## CLAIMS

1. An organic EL device comprising an organic layer including a plurality of light emitting layers, said organic layer sandwiched between an anode and a cathode, wherein said light emitting layers comprise a red light emitting layer, a green light emitting layer, and a blue light emitting layer laminated in this order from the anode side.

2. The organic EL device as set forth in claim 1, wherein said red light emitting layer has a hole transporting property.

3. The organic EL device as set forth in claim 2, wherein said red light emitting layer includes a hole transporting light-emitting material.

4. The organic EL device as set forth in claim 1, wherein said green light emitting layer has a positive and negative charge transporting property.

5. The organic EL device as set forth in claim 1, wherein said blue light emitting layer has an electron transporting property.

6. The organic EL device as set forth in claim 1, wherein said blue light emitting layer comprises a positive and negative charge transporting blue light

emitting layer and an electron transmitting blue light emitting layer laminated in this order from the anode side.

7. The organic EL device as set forth in claim 1, wherein said red light emitting layer has a hole transporting property, said green light emitting layer has a positive and negative charge transporting property, and said blue light emitting layer has an electron transporting property.

8. A display comprising a color filter provided on the light take-out surface side of an organic EL device for emitting white light, wherein

said organic EL device comprises an organic layer including a plurality of light emitting layers, said organic layer interposed between an anode and a cathode; and

said light emitting layers comprise a red light emitting layer, a green light emitting layer, and a blue light emitting layer laminated in this order from the anode side.
